- Commercial & industrial installations
- Maintenance & repair.
- Cable jointing
- testing & inspection
- P.A.T. testing

Maintenance and Fault Finding

As a business, safety is of the utmost importance. Regular maintenance of your electrical installations and equipment will help stop problems from developing. Our skilled electricians can do planned maintenance at a time to suit you, or in the event of a problem, we will find the fault and fix it with minimal fuss.

Security Lighting

Well-lit premises are safer premises. We use a wide range of security lighting, including movement sensors and light level sensors (so the lights come on automatically as it gets dark). We can install new lighting for you, or get the lights that you already have working properly.

Installation of New Lighting and Power Systems

Whether you are moving to new premises, or updating an old one, we can design and install a lighting and power system, that will allow your business to look and perform at its best.
